

VersiTank[®] 250 – Green Wall System

Elmich has developed **VersiTank 250** stormwater tanks that enable unattractive perimeter and dividing walls to be converted to aesthetically pleasing planted “greened” walls. The system may be installed on small sections of residential buildings or form a part of a unique feature on commercial structures.

VersiTank 250 modular, stormwater tanks cater for all volume requirements and are assembled using high strength plastic panels (right)

A geotextile bag is inserted into the **VersiTank 250** module (left) and growing media is installed (bottom left)

A range of plant species are inserted into perforations in the geotextile in **VersiTank 250** units (right)

VersiTank 250 modules inserted into metal frames anchored into perimeter and dividing walls in Singapore (right). Plants are drip irrigated from the top

The “Salad Bar” designed by Turf Design Studios in Sydney utilized **VersiTank 250** to support a range of herbs and vegetables. The nutrient solution is captured at the base and recycled by pumping to the top.
