Adjustable Low Height Decking Support

Elmich Australia Pty Ltd is proud to introduce SpiraPave® high strength, easy-to-install bearer supports for low height decks.

For low height decking installations of 17mm to 87 mm, SpiraPave® offers many advantages "Units can be individually adjusted in 1mm height increments to cater for varying decking heights", said David Oliver, Elmich Managing Director. "A slope corrector is also incorporated to compensate for slopes of up to 5%."

Part of a total range of complementary components, SpiraPave® which supports decking from 80 mm up to 1050 mm. integrates with Elmich's VersiJack.

ADVANTAGES OF SPIRAPAVE®

- ☒ 17 to 87 mm height range in 1 mm increments
- ☒ Made from recycled plastic and withstands up to 2.5 tonnes
- ☒ Light-weight compared to brick, metal or timber supports systems
- ☒ Smooth base does not damage waterproof membranes
- ☒ Rot proof and simple to install
- ☒ Caters for warped 50 to 85 mm bearers

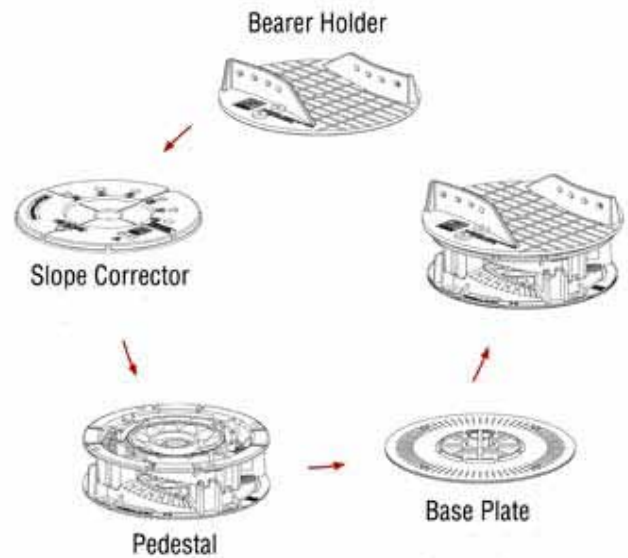

SpiraPave® is easy to install and supports up to 2.5 tonnes per unit.

"SpiraPave® was created in response to requests to supply a low height ultra strong decking support that caters for warped timber" said Oliver. "It does not require specialised labour to install and unlike timber support systems does not rot, warp or absorb water nor provide a breeding ground for mosquitoes and other insects" he said.

Made from recycled plastic, SpiraPave® caters for 50 to 85mm timber bearers

"SpiraPave® is a fantastic addition to the Elmich range," said Oliver. "For ease of installation, long term reliability and flexible adjustability, we believe it offers a vastly superior solution for low height decking in all types of situations."
