

TurfPave[®] - Stabilized Turf For Car Parks

The NSW Department of Sport and Recreation selected **TurfPave** to stabilize 4,500 square metres of overflow car parking area at the Sydney Academy of Sport at Narrabeen NSW.

TurfPave is a lightweight, high strength interlocking plastic module

TurfPave is installed under the turf surface and stabilizes turf, grass and decorative gravel

TurfPave offers specifiers and developers a practical cost effective alternative to concrete, bitumen and paved surfaces

TurfPave modules were interlocked and positioned on a compacted free draining gravel sub-base (right). The high strength flexible modules conform to uneven surfaces

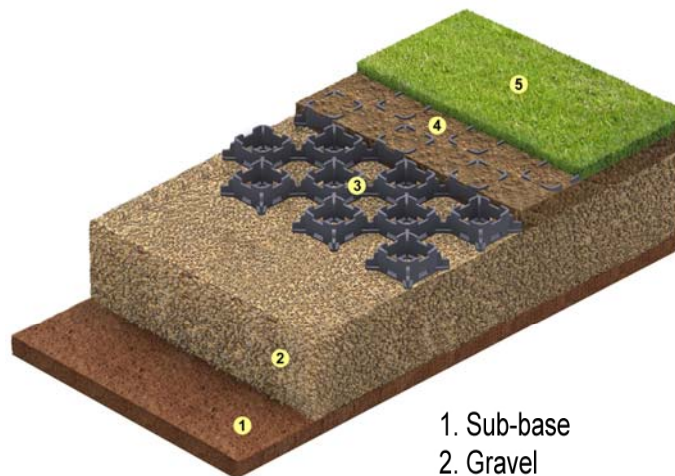

TurfPave modules were in-filled with a soil mix (top right) and turf rolls then installed

TurfPave allows large overflow car parking areas (right) to withstand vehicle usage during sports meetings and offers an effective alternative to impermeable asphalt surfaces

Applications

- Vehicle parking lots
- Emergency vehicle roads
- Golf courses
- Street shoulder areas
- Slope stabilization

1. Sub-base
2. Gravel
3. TurfPave®
4. Soil
5. Grass/Turf
