

TurfPave®

Turf and Gravel Stabilization

TurfPave is designed for stabilizing and supporting turf, grass and decorative gravel and offers architects and developers a practical grassed alternative to concrete and asphalt driveways, parking lots and walkways.

TurfPave has an 'open' design, high cell walls and associated side notches that aid vigorous turf development. The flexible design allows conformity to uneven areas and the high compressive strength exceeds the minimum load requirement demanded by the latest generation fire trucks and maintenance equipment.

Indoorpilly Golf Course used **TurfPave** to stabilize golf cart parth ways

A resident adjacent the Emerald Lakes Golf Course in Queensland used **TurfPave** to stabilize lawn for golf cart parking.

TurfPave stabilizes salt tolerant paspalum on boat ramps at Airlie Beach on the Whitsundays in Queensland.

Albury Council in NSW installed **TurfPave** to stabilize scoria on verge parking areas.
