

VersiTank® Storm Water Tanks

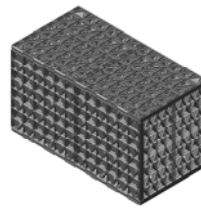

Elmich – a leader in the design and manufacture of products for the landscape and construction industries, offers a range of modular underground storm water tanks. **VersiTanks** cater for run-off from houses up to large commercial developments.

VersiTanks detain and retain stormwater underground

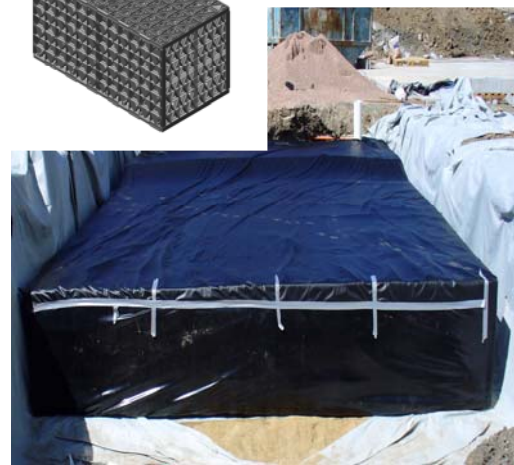

VersiTanks are easily assembled on-site by clipping together, lightweight, high strength interlocking panels

VersiTanks interlock horizontally and vertically giving maximum stability

VersiTanks may be installed under trafficable areas

VersiTank Plus 840

Applications

- Sub-surface water storage
- Sub-surface water infiltration

A 180,000 litre VersiTank storm water re-use system at Kilbreda College at Mentone, Victoria, enables stored water to be used to irrigate sports fields. The collaborative project, that actively involved college students, resulted in Chadoak Plumbing and Drainage, winning the Green Plumbers Commercial Plumbers Project of the Year Award

VersiTank system enveloped with Bidim A34 geotextile and an impermeable membrane stores storm water at Kilbreda College

A large VersiTank installation in Geraldton Western Australia, supplied by Geofabrics Australasia Pty Ltd., acts as an underground infiltration system for storm water run-off from an industrial estate.

A number of VersiTank re-use systems were installed at a residential estate at Berry NSW to enable captured and stored water to be used to irrigate landscaped areas.
